#Question 3: Virtual Environment Application
# Create a Python program that:
# 1. Takes a list of integers as input.
# 2. Creates a new virtual environment called sortenv.
# 3. Installs a package (such as numpy) in the virtual environment.
# 4. Sorts the list using a numpy method (numpy.sort()).
# 5. Prints the sorted list.
import numpy as np
user_input = input("Enter a list of numbers: ")
user_input = user_input.strip("[]")
user_input = user_input.replace(",", " ")
numbers = list(map(int, user_input.split()))
sorted_list = np.sort(numbers)
print("The sorted list is:", list(sorted_list.tolist()))
